DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 15-17, drawn to method of treating water in a pond, classified in class 210, subclass 602.
 - II. Claims 18-20, drawn to a water treatment apparatus for treating pond water and constructed to be positioned in a wetlands zone, classified in class 210, subclass 170.
 - III. Claims 21-31, drawn to an apparatus for the collection and distribution of water, classified in class 239, subclass 566.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions Groups I and II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the process as claimed can be practiced by another and materially different apparatus, such as with a disbursing module that is not elongated with an inlet end and an outlet end coupled to the stack.
3. Inventions Group I and Group III are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this

Art Unit: 3752

case the apparatus can be used to practice another and materially different process, such as a sprinkler irrigation system to water a lawn or crop.

4. Inventions Group II and Group III are related as combination and subcombination.

Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because it does not recite the body portion of the stack constructed to extend vertically upwardly from the base portion, so that water can flow between the module and the stack through the fluid coupling assembly. The subcombination has separate utility such as being used to irrigate a lawn or crop. Group II is considered a combination claim because of its recitation of the water treatment apparatus constructed to be positioned in a wetlands zone having a bottom and a top surface, a hollow cylindrical stack formation to be supported on the wetlands zone bottom and extend through the top surface of the wetlands zone and the module constructed to be positioned on the wetlands zone bottom.

5. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

6. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
